**17b - CCS: guarded processes**

# CCS guarded processes

# CCS op. semantics

$$\text{Act)} \frac{}{\mu.p \xrightarrow{\mu} p} \quad \text{Res)} \frac{p \xrightarrow{\mu} q \quad \mu \notin \{\alpha, \bar{\alpha}\}}{p\backslash\alpha \xrightarrow{\mu} q\backslash\alpha} \quad \text{Rel)} \frac{p \xrightarrow{\mu} q}{p[\phi] \xrightarrow{\phi(\mu)} q[\phi]}$$

$$\text{SumL)} \frac{p_1 \xrightarrow{\mu} q}{p_1 + p_2 \xrightarrow{\mu} q} \quad \text{SumR)} \frac{p_2 \xrightarrow{\mu} q}{p_1 + p_2 \xrightarrow{\mu} q}$$

$$\text{ParL)} \frac{p_1 \xrightarrow{\mu} q_1}{p_1 | p_2 \xrightarrow{\mu} q_1 | p_2} \quad \text{Com)} \frac{p_1 \xrightarrow{\lambda} q_1 \quad p_2 \xrightarrow{\bar{\lambda}} q_2}{p_1 | p_2 \xrightarrow{\tau} q_1 | q_2} \quad \text{ParR)} \frac{p_2 \xrightarrow{\mu} q_2}{p_1 | p_2 \xrightarrow{\mu} p_1 | q_2}$$

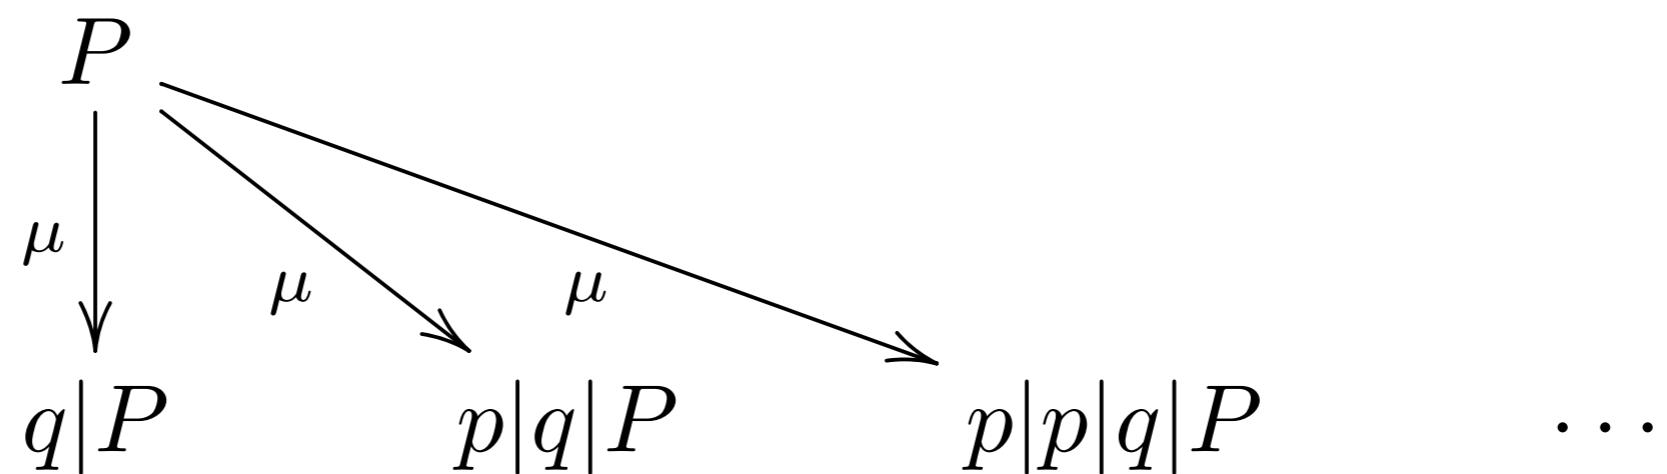

$$\text{Rec)} \frac{p[x/\text{rec } x. \ p] \xrightarrow{\mu} q}{\text{rec } x. \ p \xrightarrow{\mu} q}$$

# CCS: guarded processes

the allowed form of recursion is very general

there are processes with infinitely many outgoing transitions

suppose  $p \xrightarrow{\mu} q$       take  $P \triangleq \text{rec } x. p|x$        $P \triangleq p|P$

such processes are called *infinitely branching* and are BAD

# CCS: guarded processes

guarded processes guarantee that process variables occur under a prefix (recursion is guarded by some action)

let  $X$  be a set of process variables

$G(p, X)$  all recursively defined names are guarded in  $p$   
if a name in  $X$  occurs free in  $p$  it is prefixed by an action

$$G(\text{nil}, X) \triangleq \text{true}$$

$$G(p[\phi], X) \triangleq G(p, X)$$

$$G(x, X) \triangleq x \notin X$$

$$G(p + q, X) \triangleq G(p, X) \wedge G(q, X)$$

$$G(\mu.p, X) \triangleq G(p, \emptyset)$$

$$G(p|q, X) \triangleq G(p, X) \wedge G(q, X)$$

$$G(p \setminus \alpha, X) \triangleq G(p, X)$$

$$G(\text{rec } x. p, X) \triangleq G(p, X \cup \{x\})$$

a closed process  $p$  is *guarded* if  $G(p, \emptyset)$  holds true

# Exercise: guarded?

$$R \triangleq \mathbf{rec} \ x. \ \alpha.x + \beta$$

$$G(R, \emptyset)?$$

$$G(\mathbf{rec} \ x. \ \alpha.x + \beta, \emptyset) = G(\alpha.x + \beta, \{x\})$$

$$= G(\alpha.x, \{x\}) \wedge G(\beta, \{x\})$$

$$= G(x, \emptyset) \wedge G(\mathbf{nil}, \emptyset)$$

$$= x \notin \emptyset \wedge \mathbf{true}$$

$$= \mathbf{true}$$

# Exercise: guarded?

$$T \triangleq \mathbf{rec} \ x. \ (\alpha|x) + \beta \quad G(T, \emptyset)? \ \textcolor{red}{\times}$$

$$G(\mathbf{rec} \ x. \ (\alpha|x) + \beta, \emptyset) = G((\alpha|x) + \beta, \{x\})$$

$$= G(\alpha|x, \{x\}) \wedge G(\beta, \{x\})$$

$$= G(\alpha, \{x\}) \wedge G(x, \{x\}) \wedge G(\mathbf{nil}, \emptyset)$$

$$= G(\mathbf{nil}, \emptyset) \wedge x \notin \{x\} \wedge \mathbf{true}$$

$$= \mathbf{true} \wedge \mathbf{false}$$

$$= \mathbf{false}$$

# Exercise: guarded?

$$U \triangleq \mathbf{rec} \ x. \ \alpha | \beta.x$$

$$G(U, \emptyset)?$$

$$G(\mathbf{rec} \ x. \ \alpha | \beta.x, \emptyset) = G(\alpha | \beta.x, \{x\})$$

$$= G(\alpha, \{x\}) \wedge G(\beta.x, \{x\})$$

$$= G(\mathbf{nil}, \emptyset) \wedge G(x, \emptyset)$$

$$= \mathbf{true} \wedge x \notin \emptyset$$

$$= \mathbf{true}$$

# Exercise: guarded?

**rec**  $x.$   $x$

unguarded

**rec**  $x.$   $\alpha.$ **rec**  $y.$   $x$

guarded

**rec**  $x.$   $\alpha.$ **rec**  $y.$   $x + y$

unguarded

**rec**  $x.$   $\alpha.$ **rec**  $y.$   $x|y$

unguarded

**rec**  $x.$   $\alpha.$ **rec**  $y.$   $x|\beta.y$

guarded

# Properties of guarded processes

# Guarded variables

**TH.**  $G(p, X \cup \{x\}) \Rightarrow G(p, X)$

**TH.**  $G(p, X) \wedge x \notin \text{fv}(p) \Rightarrow G(p, X \cup \{x\})$

proofs by structural induction on  $p$  (omitted)

# Substitutions preserve guardedness

**TH.**  $G(p, X) \wedge \bigwedge_{i \in [1, n]} G(p_i, X) \Rightarrow G(p^{[p_1/x_1, \dots, p_n/x_n]}, X)$

proof by structural induction on  $p$  (omitted)

# Transitions preserve guardedness

**TH.**  $G(p, X) \wedge p \xrightarrow{\mu} q \Rightarrow G(q, \emptyset)$

proof by rule induction on  $p \xrightarrow{\mu} q$  (omitted)

# Guarded processes are finitely branching

**TH.**  $G(p, \emptyset) \Rightarrow \forall \mu. \{q \mid p \xrightarrow{\mu} q\}$  is a finite set

we prove a stronger property:

**TH.**  $X = \{x_1, \dots, x_n\} \quad \sigma = [^{p_1}/_{x_1}, \dots, ^{p_n}/_{x_n}]$

$G(p, X) \wedge \bigwedge_{i \in [1, n]} G(p_i, X) \Rightarrow \{q \mid \exists \mu. p\sigma \xrightarrow{\mu} q\}$  is a finite set

*proof:* by structural induction on  $p$

we only show some cases (and omit some details)

(see next slides)

**TH.**  $X = \{x_1, \dots, x_n\}$      $\sigma = [{}^{p_1}/_{x_1}, \dots, {}^{p_n}/_{x_n}]$     (continue)

$G(p, X) \wedge \bigwedge_{i \in [1, n]} G(p_i, X) \Rightarrow \{q \mid \exists \mu. p\sigma \xrightarrow{\mu} q\}$  is a finite set

*proof:* by structural induction on  $p$

$p = \text{nil}$

$\text{nil}\sigma = \text{nil}$

$\{q \mid \exists \mu. \text{nil} \xrightarrow{\mu} q\} = \emptyset$

$p = x$

$x \in X$      $G(x, X) = \text{false}$

$x \notin X$      $x\sigma = x$      $\{q \mid \exists \mu. x \xrightarrow{\mu} q\} = \emptyset$

$p = \mu'.p'$

$\{q \mid \exists \mu. p\sigma \xrightarrow{\mu} q\} = \{p'\sigma\}$

**TH.**  $X = \{x_1, \dots, x_n\}$      $\sigma = [{}^{p_1}/_{x_1}, \dots, {}^{p_n}/_{x_n}]$     (continue)

$G(p, X) \wedge \bigwedge_{i \in [1, n]} G(p_i, X) \Rightarrow \{q \mid \exists \mu. p\sigma \xrightarrow{\mu} q\}$  is a finite set

*proof:* by structural induction on  $p$

$$p = p' \setminus \alpha \quad p\sigma = p'\sigma \setminus \alpha \quad G(p, X) = G(p', X)$$

$$\{q \mid \exists \mu. p\sigma \xrightarrow{\mu} q\} = \{q' \setminus \alpha \mid \exists \mu \notin \{\alpha, \bar{\alpha}\}. p'\sigma \xrightarrow{\mu} q'\}$$

finite, by inductive hypothesis

$$p = p'_0 + p'_1 \quad p\sigma = p'_0\sigma + p'_1\sigma \quad G(p, X) = G(p'_0, X) \wedge G(p'_1, X)$$

$$\{q \mid \exists \mu. p\sigma \xrightarrow{\mu} q\} = \{q'_0 \mid \exists \mu. p'_0\sigma \xrightarrow{\mu} q'_0\} \cup \{q'_1 \mid \exists \mu. p'_1\sigma \xrightarrow{\mu} q'_1\}$$

finite, by inductive hypotheses

**TH.**  $X = \{x_1, \dots, x_n\}$      $\sigma = [{}^{p_1}/_{x_1}, \dots, {}^{p_n}/_{x_n}]$     (continue)

$G(p, X) \wedge \bigwedge_{i \in [1, n]} G(p_i, X) \Rightarrow \{q \mid \exists \mu. p\sigma \xrightarrow{\mu} q\}$  is a finite set

*proof:* by structural induction on  $p$

$p = \mathbf{rec} \ x. p'$  without loss of generality  $x \notin X \cup \bigcup_{i \in [1, n]} \text{fv}(p_i)$

$p\sigma = \mathbf{rec} \ x. p'\sigma$

$G(p, X) = G(p', X \cup \{x\})$

$\{q \mid \exists \mu. p\sigma \xrightarrow{\mu} q\} = \{q' \mid \exists \mu. p'\sigma[\mathbf{rec} \ x. p'\sigma/x] \xrightarrow{\mu} q'\}$

finite, by inductive hypotheses
