

# Piattaforme Abilitanti Distribuite - PAD -

## Distributed Enabling Platforms

Nicola Tonellotto

(ISTI, CNR)

[nicola.tonellotto@isti.cnr.it](mailto:nicola.tonellotto@isti.cnr.it)

# Today

# Who?

- Nicola Tonellotto

- Laurea degree in Computer Engineering
- PhD in Information Engineering @ UNIPI (Italy)
- PhD in Computer Engineering @ UNIDO (Germany)
  
- Researcher @ ISTI-CNR since 2002
  - ▶ Grid Computing
  - ▶ Scheduling
  - ▶ Information Retrieval
  
- TA @ UNIPI since 2002
  - ▶ Parallel and Distributed Applications
  - ▶ Fundamentals of Computer Science
  - ▶ C/C++ Programming
  - ▶ Java Programming
  - ▶ Distributed Enabling Platforms

# What?

# What is the meaning of words?

- Distributed...
  - relating to a **computer network** in which at least some of the processing is done by the **individual computers** and **information is shared** by and often stored at the computers
- Enabling...
  - to make possible, practical, or easy
- Platforms...
  - the computer architecture and equipment used for a particular purpose

# To do what?

# Solve large scale problems!

- In research
  - Frontier research in many different fields today requires world-wide collaborations
  - Online access to expensive scientific instrumentation
  - Scientists and engineers will be able to perform their work without regard to physical location
  - Simulations of world-scale mathematical models
  - Batch analysis of gazillion-bytes of experimental data
- In business
  - Crawling, indexing, searching the Web
  - Web 2.0 applications
  - Mining information
  - Highly interactive applications
  - Online analysis of gazillion-bytes of usage data

# World-wide Collaborations

# Expensive Scientific Instruments

# World-scale Simulations

# Batch analysis of huge data

# Managing the Web

**Web** [Images](#) [Groups](#) [News](#) [Froogle](#) [Local](#) [more »](#)

# Online analysis of huge data

# Our data driven world...

- Science
  - Databases for astronomy, genomics, natural languages, seismic modeling, ...
- Humanities
  - Scanned books, historic documents, ...
- Commerce
  - Corporate sales, stock market transactions, census, airline traffic, ...
- Entertainment
  - Hollywood movies, Internet images, MP3 music, ...
- Medicine
  - Patient records, drugs composition, ...

# Big Enough?

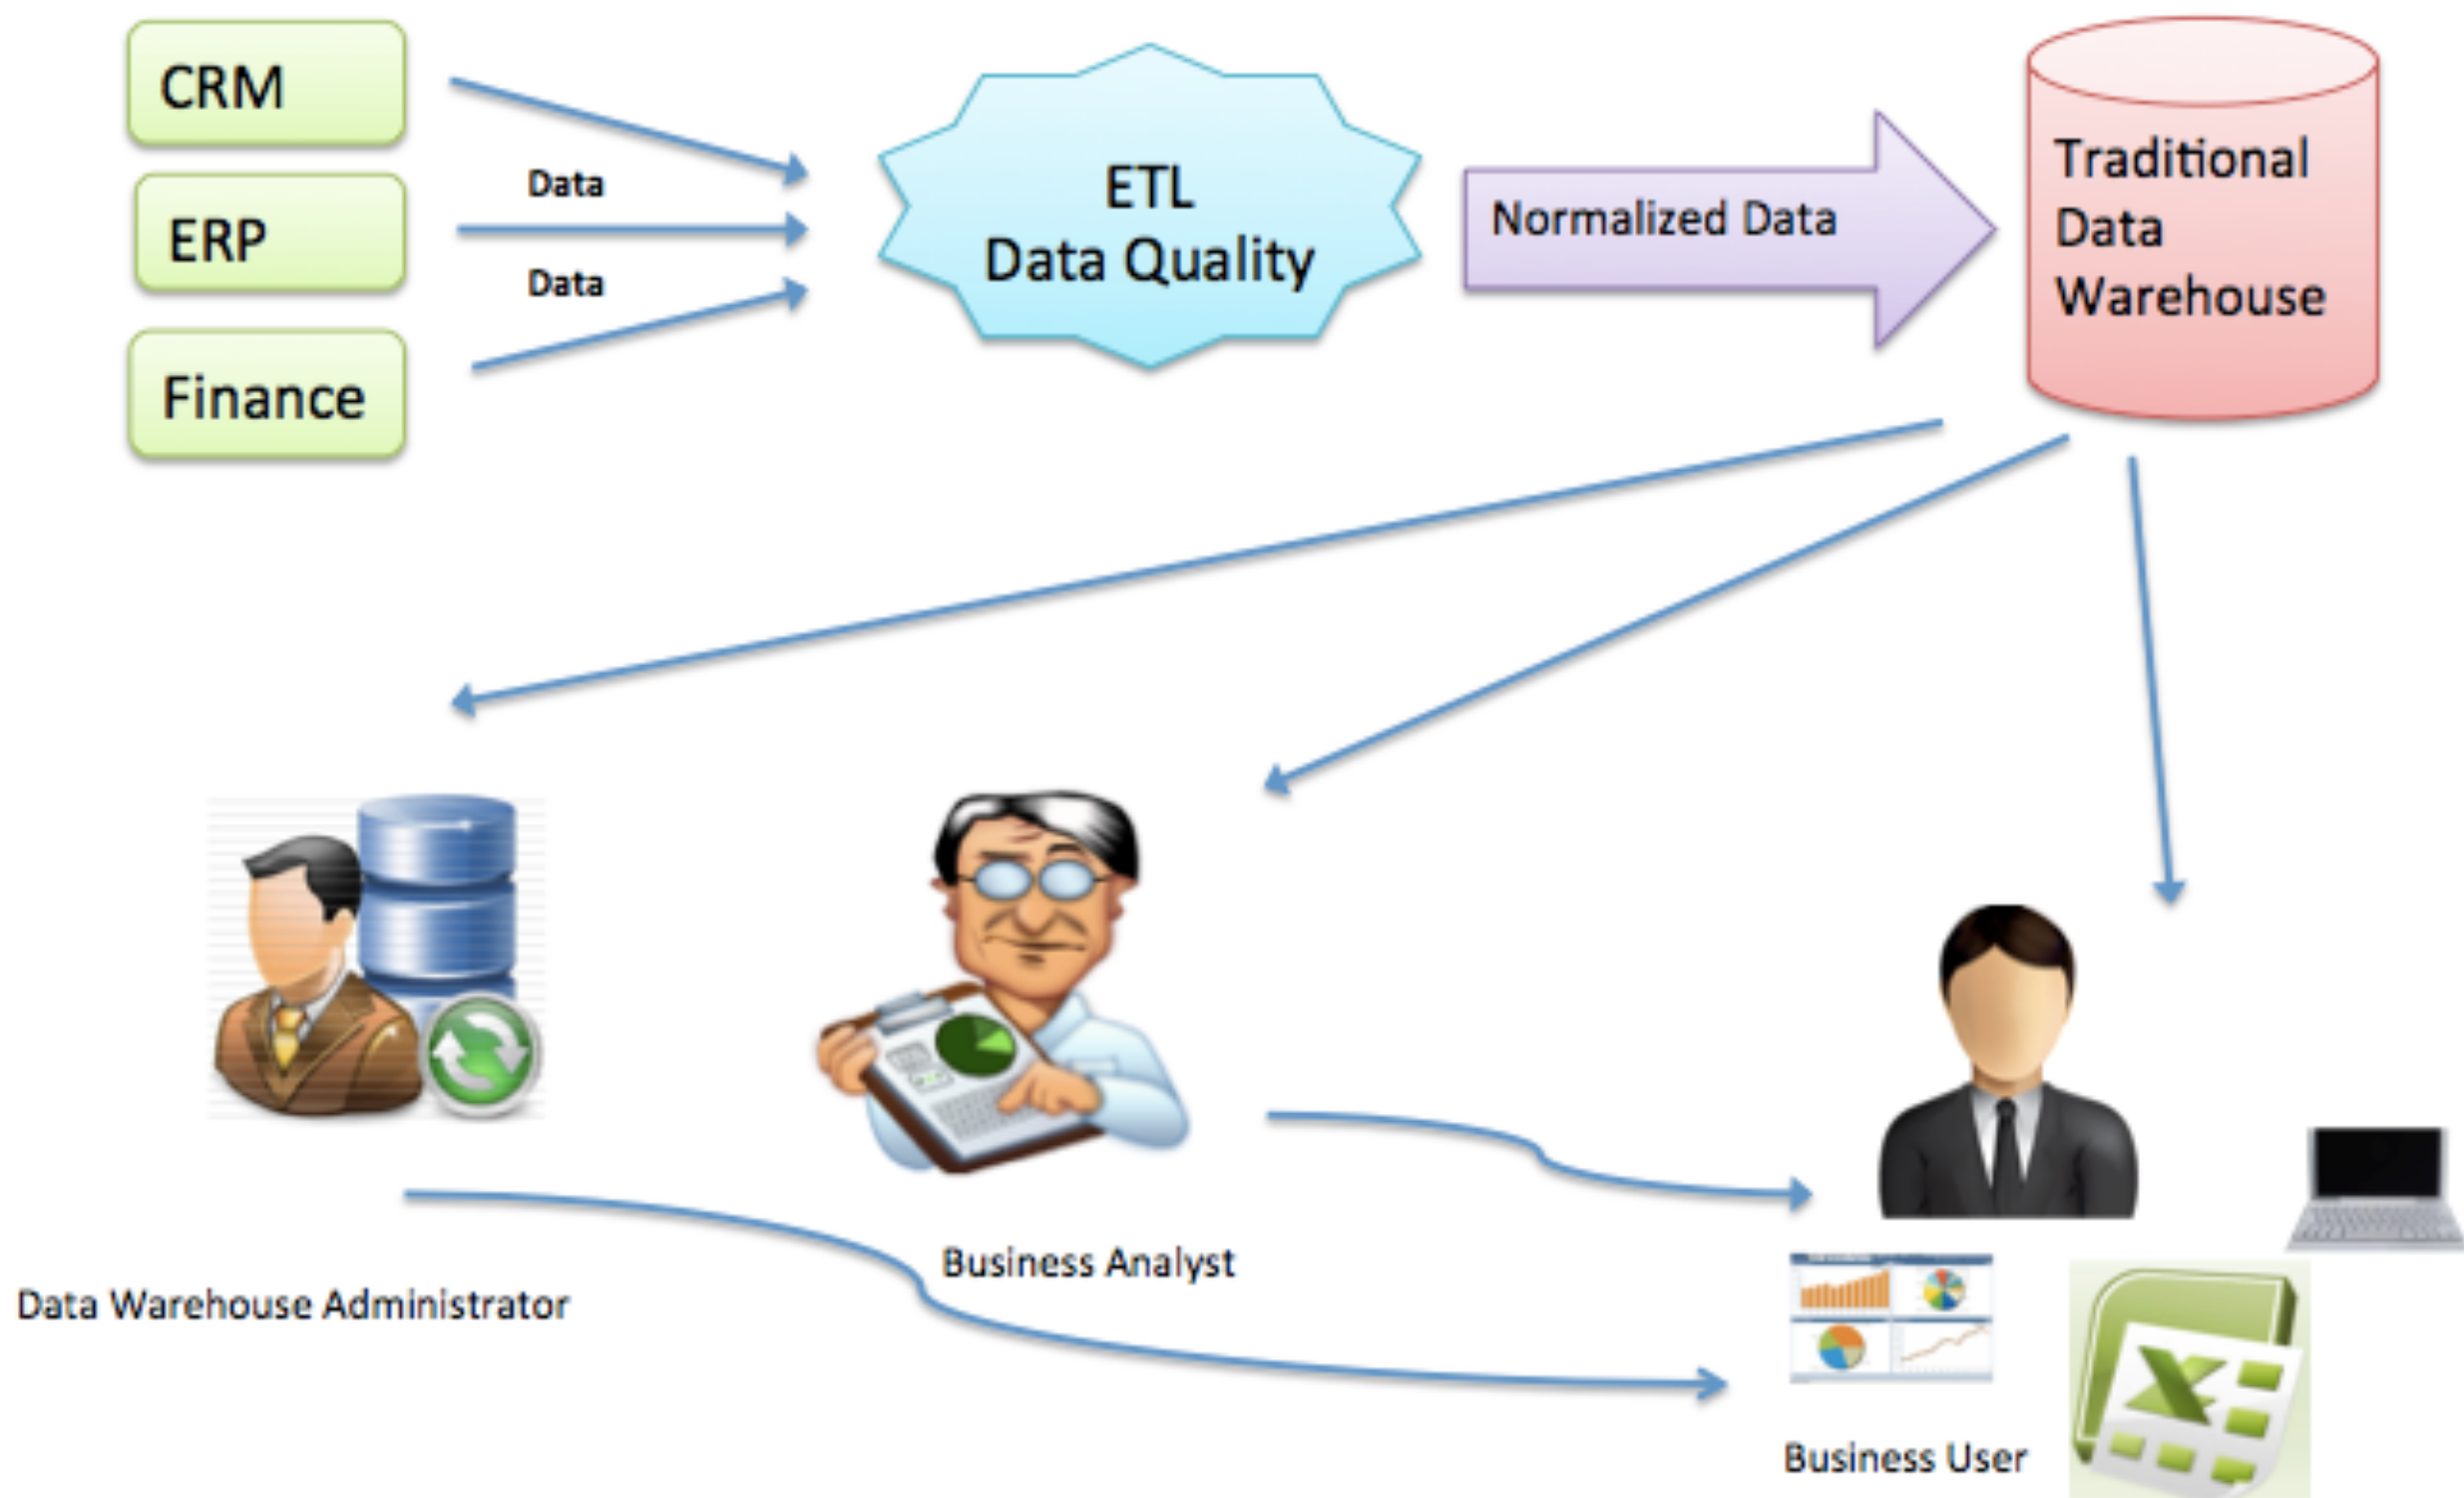

- Large Hadron Collider:
  - 10 EB/year generated
  - 1 ZB/year forecasted
  - 103 scientists
  - 102 institutions
- Large Synoptic Survey Telescope (2016)
  - 15 TB/night
  - 6.8 PB/year
- Google (2010)
  - 24 PB/day processed (queries)
  - 8 EB/day processed (documents)
  - 0.1 sec query latency
- Facebook (2009)
  - 15 TB/day user data
- eBay (2009)
  - 50 TB/day user data
- Walmart
  - 6000 stores, 267 M items/day

# Data everywhere!

taken from: <http://now.sprint.com/nownetwork/>

# Traditional Data Processing & Analysis

taken from: <http://wikibon.org/>

# Current Data Nature Sources...

- Nature of data
  - Volume
  - Variety
  - Speed
- Sources of data
  - Social Networking and Media
  - Mobile Devices
  - Internet Transactions
  - Networked Devices and Sensors

# The Changing Nature of Data

"traditional" data	<b>BIG DATA</b>
gigabytes to terabytes	<b>PETABYTES TO EXABYTES</b>
centralized	<b>DISTRIBUTED</b>
structured	<b>SEMI-STRUCTURED AND UNSTRUCTURED</b>
stable data model	<b>FLAT SCHEMAS</b>
known complex interrelationships	<b>FEW COMPLEX INTERRELATIONSHIPS</b>

taken from: <http://wikibon.org/>

# Modern Data Architectures

- Sentiment Analysis
- Risk Modeling
- Fraud Detection
- Marketing Campaign Analysis
- Customer Churn Analysis
- Social Graph Analysis
- Customer Experience Analytics
- Network Monitoring
- Research And Development

# Famous(?) predictions (I)

- "I think there is a world market for maybe five computers."  
- Thomas Watson, chairman of IBM, 1943
- "I have travelled the length and breadth of this country and talked with the best people, and I can assure you that data processing is a fad that won't last out the year."  
- The ed in charge of biz books for Prentice-Hall, 1957
- "There is no reason anyone would want a computer in their home."  
- Ken Olson, president, chairman and founder of DEC, 1977

# How?

# (not so?) Hot Technologies

## 1961

[...] computing may someday be organized as a **public utility** just as telephone system is a public utility [...] the computer utility could become the basis of a new and important industry [...]

John McCarthy (1927-2011)  
Turing Award (1971)  
Artificial Intelligence

## 1969

As of now, computer networks are still in their infancy, but as they group up and become sophisticated, we will probably see the spread of **computer utilities** which, like present electric and telephone utilities, will service individual homes and offices across the country.

Leonard Kleinrock (1934)  
Queueing Theory

# The 5th Utility

Computing is being transformed to a model consisting of services that are commoditized and delivered in a manner similar to traditional utilities

# Demand for more computing power

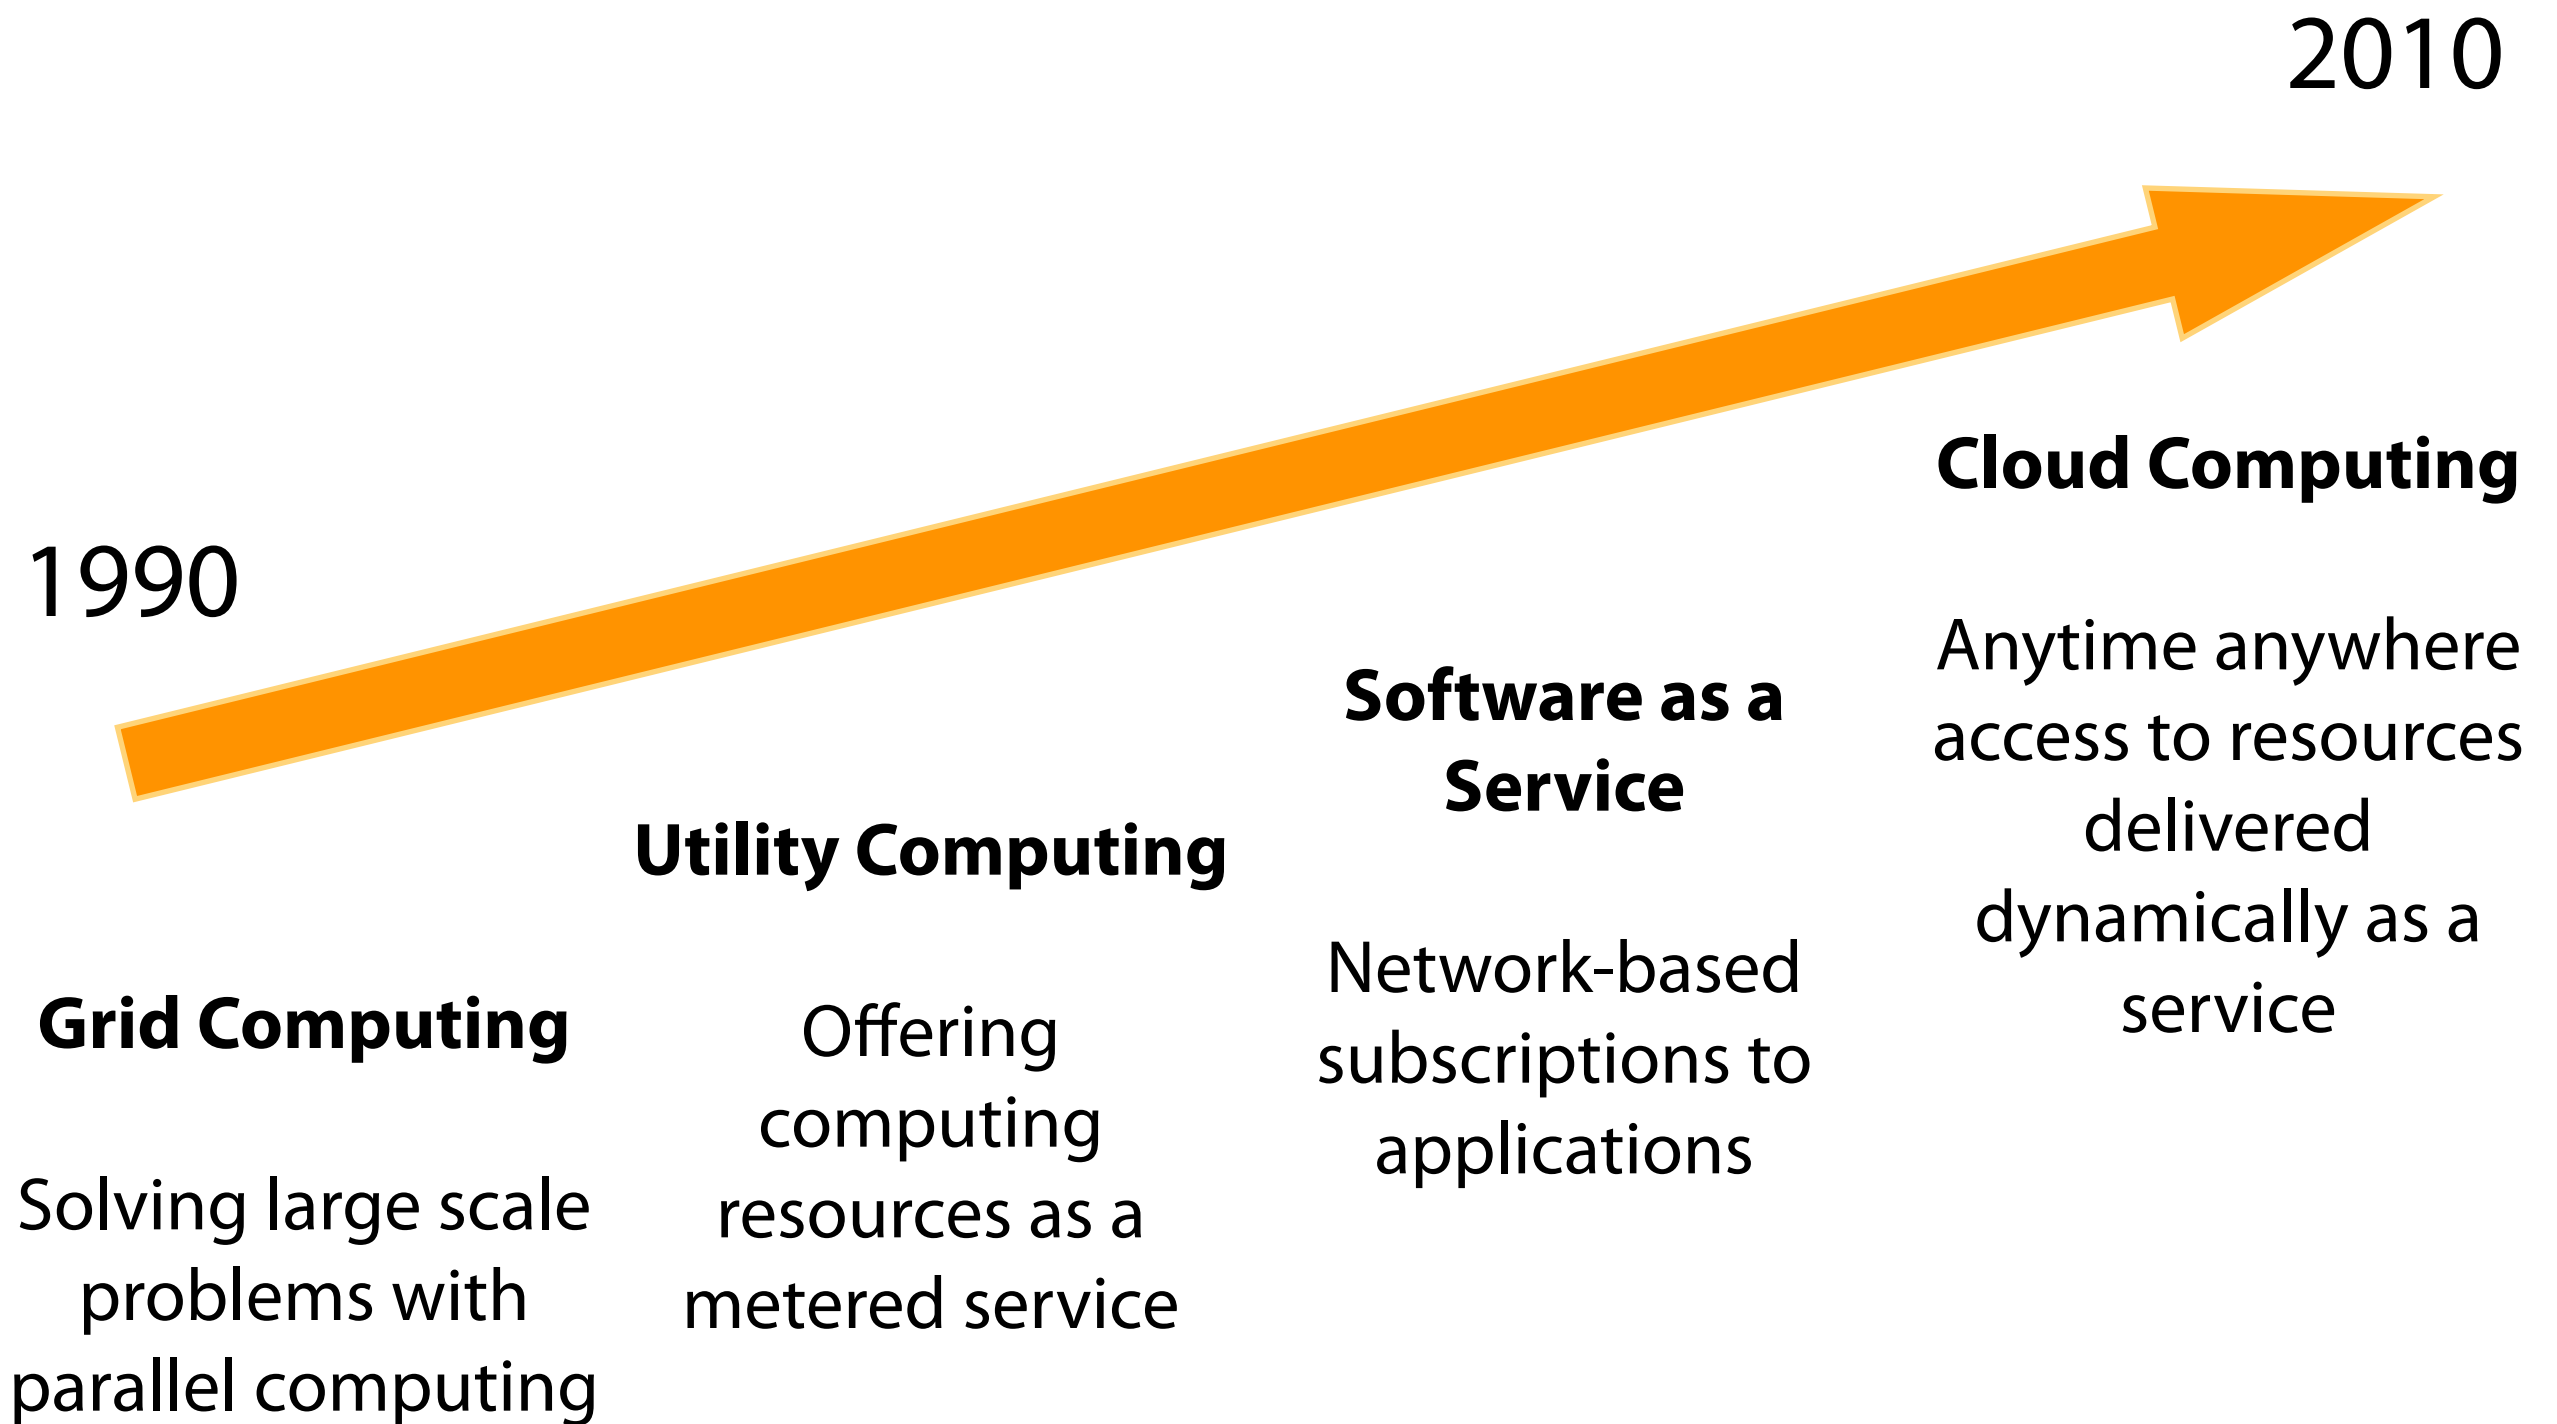

- There are three ways to improve performance:
  - Work smarter
  - Work harder
  - Get help
- In computing:
  - Using optimized algorithms and techniques
  - Using faster hardware
  - Using multiple computers

# Cluster Computing

- A cluster is a type of parallel and distributed system, which consists of a collection of **inter-connected stand-alone computers** working together as a **single integrated computing resource**.
- Basic element is the **node**, a single or multiprocessor system with memory, I/O and OS
- Generally two or more nodes connected together
- In a single **rack**, or physically separated and connected via a LAN
- Appears as a single system to users and applications
- Specialized access, management and programming

# Grid Computing

- Problem:

Scientific instruments and experiments provide huge amount of data

- Goal:

Researchers perform their activities regardless geographical location, interact with colleagues, share and access data

- Solution:

Networked data processing centers and "middleware" software as the "glue" of resources.

# Once upon a time...

Microcomputer

Minicomputer

Cluster

Mainframe

# ...up to the Grid

# Why not just distributed?

- Distributed applications already exist!
  - But they tend to be specialised system
  - Single purpose
  - Single User Group
- Grids go further!
  - Different kinds of resources
  - Different kinds of interactions
  - Dynamic nature
  - Multiple institutions

## Key Concept

**ability to negotiate resource-sharing arrangements among a set of participating parties (providers and consumers) and then to use the resulting resource pool for some purpose**

# Grids in action

- High Energy Physics

- European Data Grid
- LHC Computing Grid

- Earth Observation

- ESA EO Grid
- Global Earth Observation Grid

- Bioinformatics

- Genome Grid

- Mathematics

- Zetagrid

- Geology

- Earthquake Engineering Simulation

- Astronomy

- SETI@home

# Cloud Computing

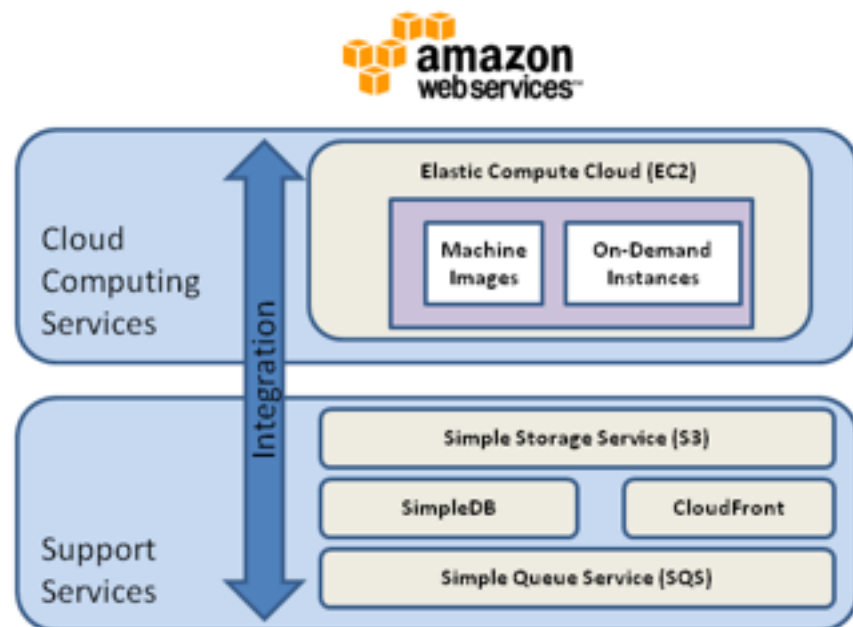

- “Cloud computing” is a very fuzzy term (to be kind)
- Depending on who you talk to:
  - a revolutionary idea that is rapidly changing the face of computing
  - an old idea whose time has come
  - just hype
  - evil
- In any case, it is changing economics behind computing in important ways

Infrastructure

Software

## Google App Engine

[Home](#) [Docs](#) [FAQ](#) [Articles](#)

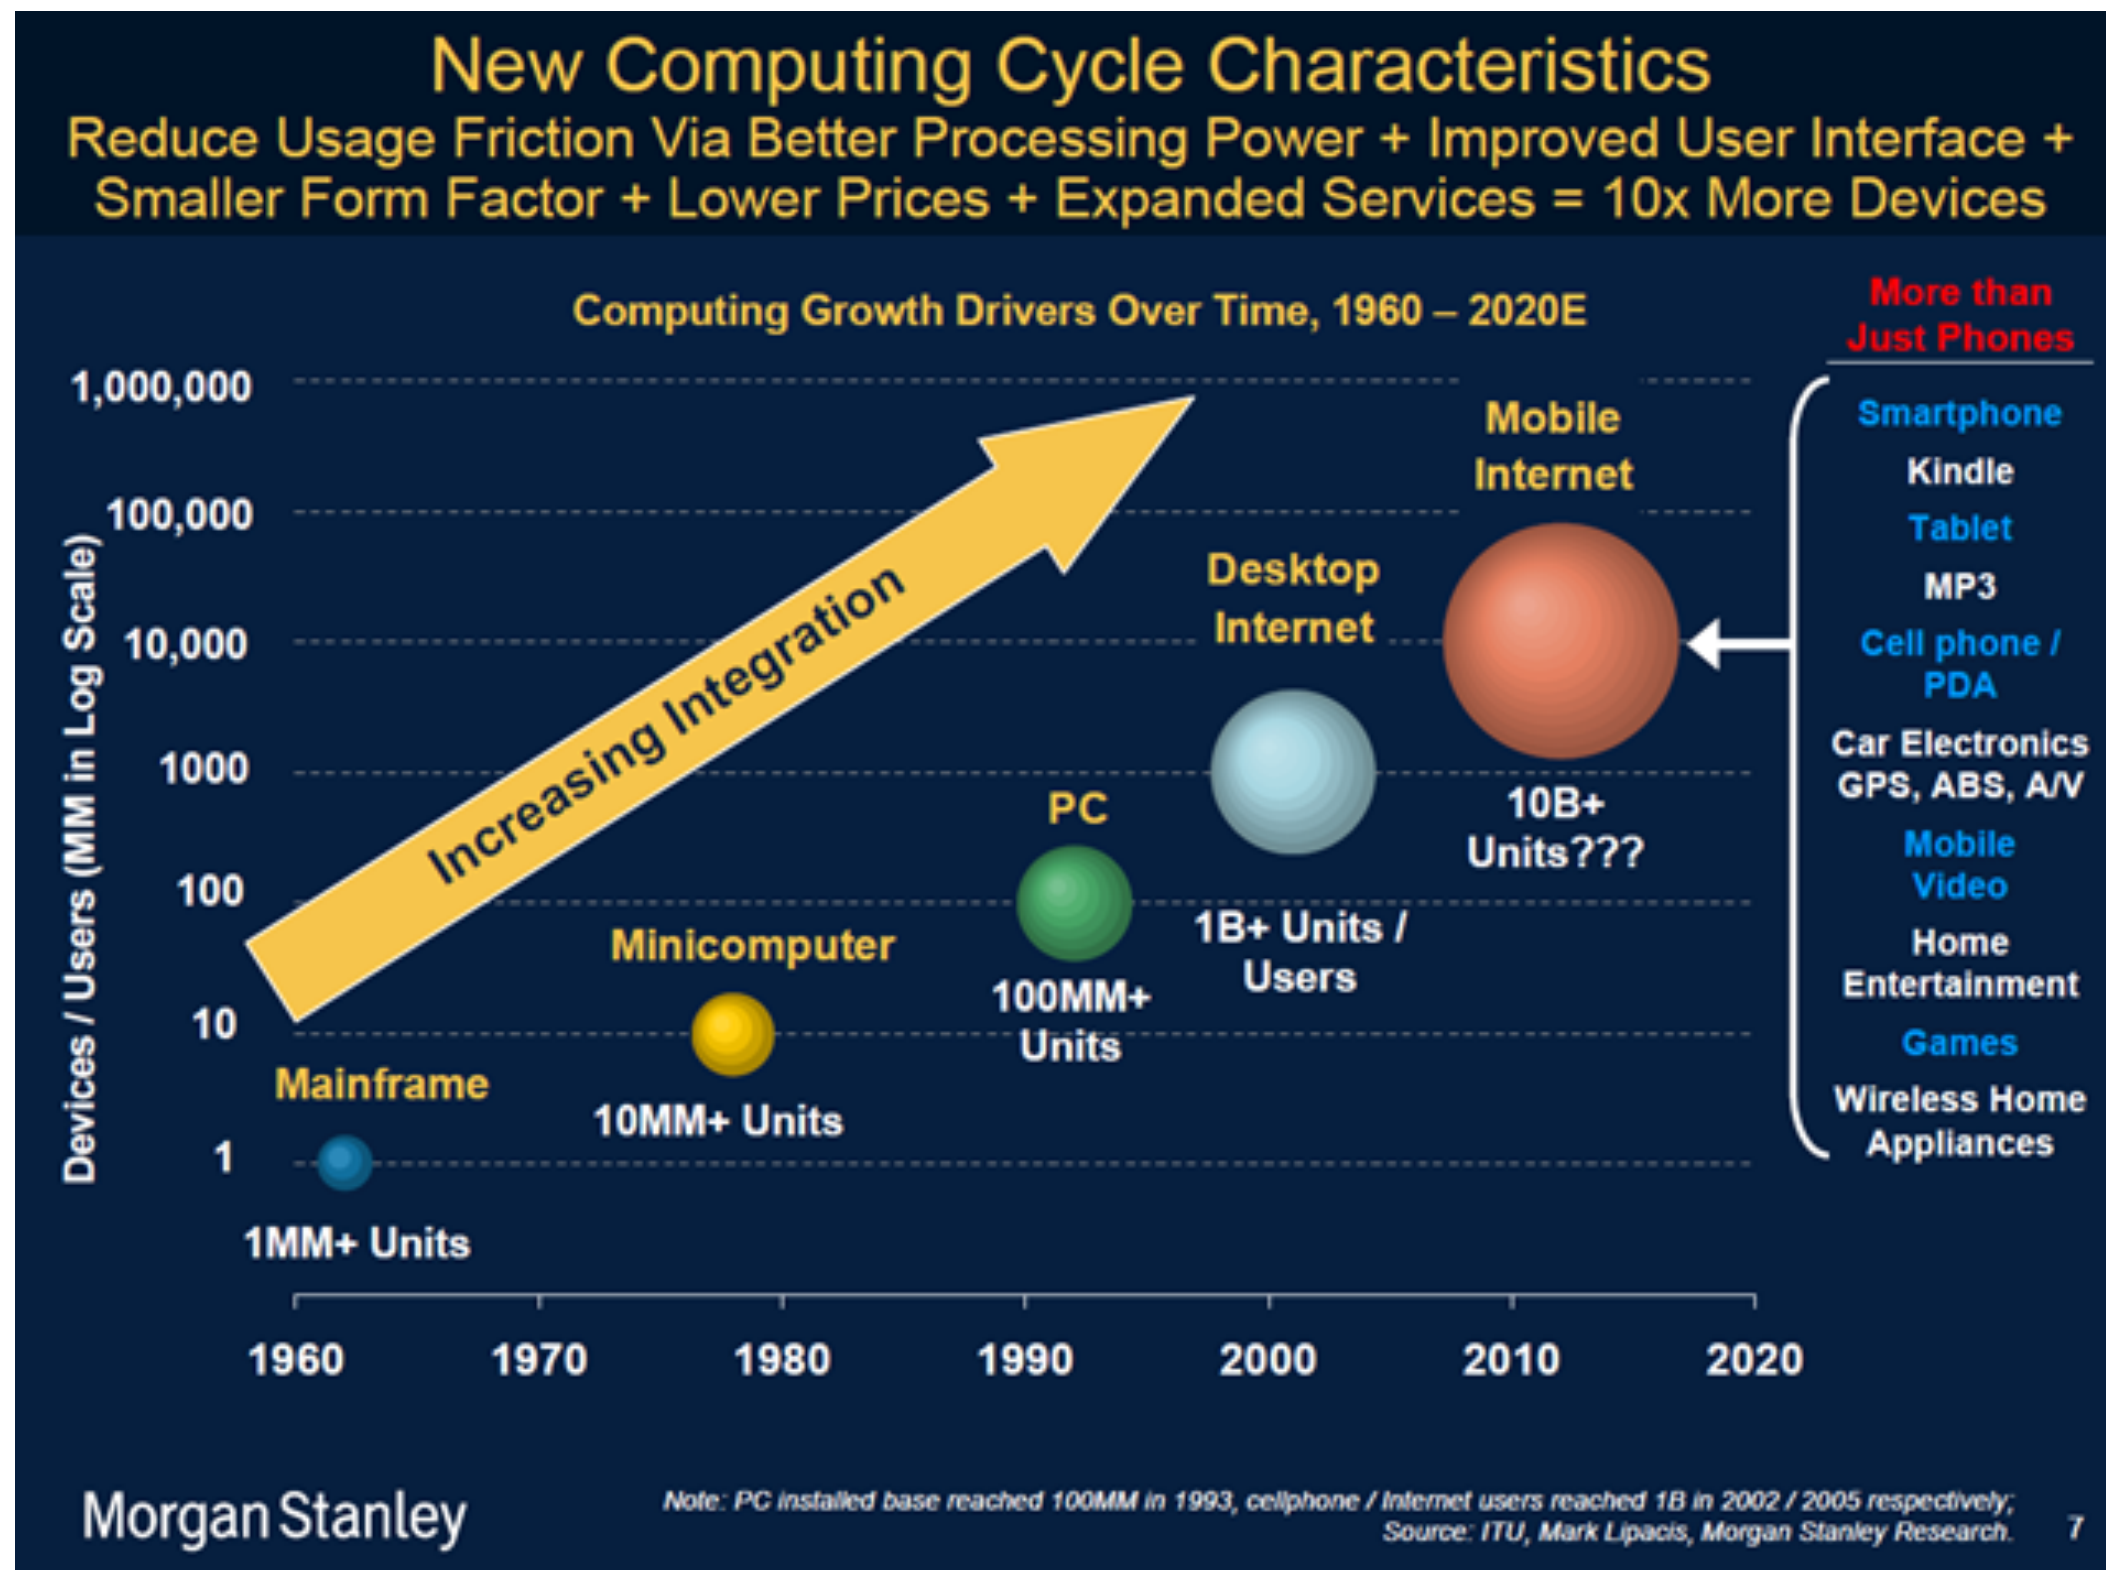

**Run your web apps on Google's infrastructure**  
Easy to build, easy to maintain, easy to scale

Google App Engine enables you to build and host web apps on the same systems that power Google applications. App Engine offers fast development and deployment; simple administration, with no need to worry about hardware, patches or backups; and effortless scalability.

Platform

# The World is going Mobile

# Large Scale Programming

HDFS

Google File System

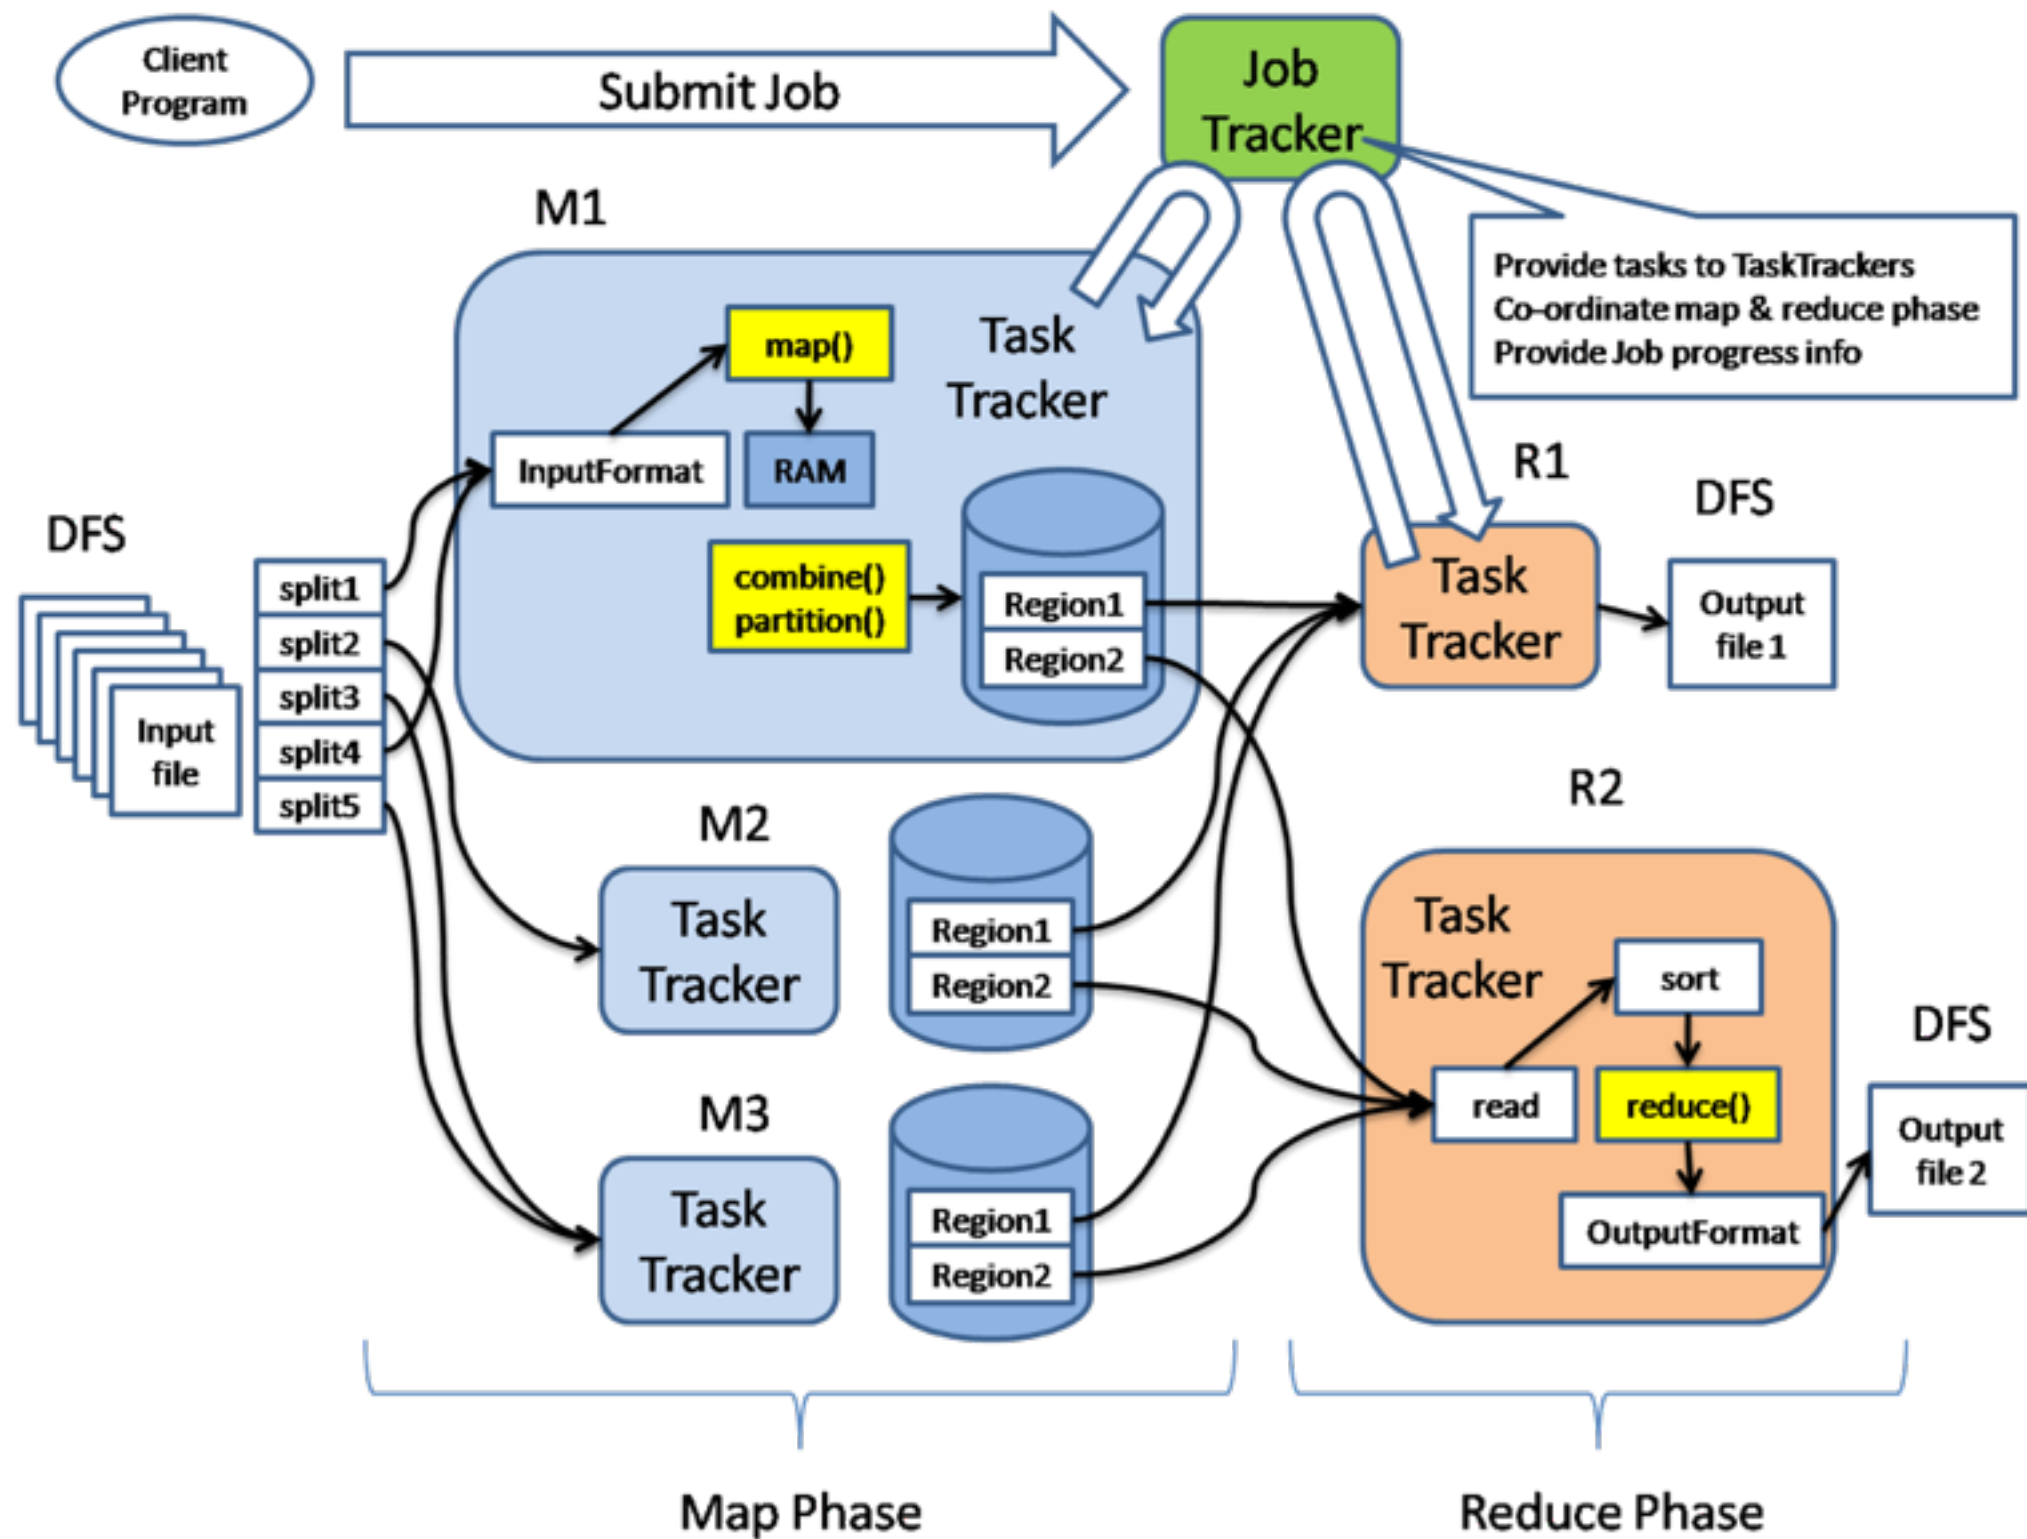

Hadoop

Google MapReduce

HBase

Google BigTable

# Map Reduce

# Where? & When?

# Course Organization

- 48 hours: ~32 lessons, ~16 laboratory
- TAs (to be confirmed)
  - Alberto Gotta
  - Salvatore Trani
- Agreement on room and timetable
  - Currently: Mon 11-13 (room L1), Thu 11-13 (room C1)
  - Depending on availability
- Highly interactive lectures
- Laboratory
  - Java programming skills required
- Notes and references available online
  - Updated in real time on the course wiki
- Final examination: project + oral session
  - To be agreed with teacher
